# THE DIFFERENT TYPES OF COLORADO SPRUCE

## Prices of Specimen Trees Grown at BOXFORD-HIGHLANDS NURSERY

*All with Balls and Burlaped*

### 1. COLORADO SPRUCE (*Picea pungens*)

This is the original green type, extremely hardy and well known for its peculiar horizontal whorls of branches and stiff needles. Both this and the two following types stand "salt water air" unusually well. The Colorado Spruce has light brown glossy cones.

7 to 14 feet specimens \$10.00 to \$50.00 each.

### 2. BLUE COLORADO SPRUCE (*Picea pungens glauca*)

The native blue variety, which runs from a bright silver blue to a deep blue almost or quite as brilliant as the Koster variety. They are selected from thousands of seedlings of Colorado Spruce, which average perhaps 1 per cent. of this fine blue form. It is a conspicuous tree, and preferred by many to the Koster type.

### 3. KOSTER BLUE SPRUCE (*Picea pungens Kosteri*)

*See illustration on opposite page.*

A variety with brilliant blue foliage, propagated only by grafting on the green type. Heretofore this form has been entirely propagated abroad, and as importations are not now permitted it has become exceedingly scarce in American Nurseries. At Boxford-Highlands Nursery may be seen hundreds of perfect specimens feathered to the ground from six to twelve feet in height, undoubtedly the finest colored and most perfect lot in any Nursery.

	Each	Per 10
6 to 7 feet, B & B - - - -	\$45.00	\$400.00
